

Orlaco unveils HLED monitor with new design

Published by American Cranes & Transport on April 2, 2019

Safety camera monitor system manufacturer Stoneridge-Orlaco will show a new 7-inch HLED monitor with a new design. Until now, the GMSL product line was focused on the CornerEye system designed to eliminate blind spots to the front and side of the truck cab from one camera.

The image was sent to a 10-inch (254 millimeter) HLED monitor, but the new smaller monitor is better for rear view systems in mobile cranes and other mobile equipment on construction sites. The new screen has a full glass cover which makes it a lot stronger, easier to clean and watertight, the company said.
